

[Curriculum Visions unique topic song

Climates from equator to pole

[Verse]

The equator sweats under a molten sky
Rain falls like silver threads that tie
The earth to its steaming breath
Hot whispers
No room for death

[Prechorus]

But the sands shift
Oh they drift
To where the dunes burn and lift

[Chorus]

From heat to ice
The weather's tune
The sun sings loud
The frost hums soon
A world that spins
A dance
A fight
From fire's kiss to polar night

[Verse 2]

The desert sighs
Its throat cracked dry
Dreams of rivers that pass it by
The Mediterranean sways
A lover's game
Wet caress
Dry refrain
Never the same

[Prechorus]

And mid-latitude stirs
A chaotic breeze
Whispering change among the trees

[Chorus]

From heat to ice
The weather's tune
The sun sings loud
The frost hums soon
A world that spins
A dance
A fight
From fire's kiss to polar night
