Dino eggs
Book: Exploring dinosaur times
Pages 10-11

Students: Fill in the answers and return for assessment

Everything here is based on our Curriculum Visions book Exploring dinosaur times.

In this segment, we are going to learn about dinosaur eggs.

You will need to go to pages 10-11 of the book.

Part 1

How do we know that dinosaurs took a lot of care with their eggs?

What happened to most dinosaur eggs?

How were some preserved until today?

Answer ...

Because some eggs were laid in individual pits.

Most eggs hatched or were dug up and eaten by other dinosaurs.

Some eggs were preserved after being buried in floods or other events.

Part 2

You can try making your own dinosaur egg. You can use papier mache or salt dough for this, but here is another easy way to make a dinosaur egg.

Mix in a large bowl:

One cup flour

3/4 cup salt

1/2 cup coffee granules

1 cup sand

1/2 - 3/4 cup water

Add water gradually to make a damp mixture that sticks together but is not too wet. Shape it with your hands into an egg shape. You can even bury a toy baby dinosaur in it.

Place the eggs on a baking sheet and leave them to dry in a warm, dry place for a few days. Turn them over once or twice a day so they dry evenly.

That is the end of this worksheet, and you can now turn to another one. Also, find out if your teacher has left you any other worksheets or special instructions on your school website.

If you are interested in this topic, continue to browse the book and watch our amazing videos. They start right on the book cover.

Or you may want to see related books. If so just go to the top of the screen, select science, and from the page that opens choose Dinosaur.
