

# Ice in the mountains

Glaciers scour away at the landscape, changing the shape of valleys and peaks.

**Q1.** Mark these features on the diagram below

- (a) valley glacier
- (b) pyramidal peak
- (c) the place where the glacier scours rock away

**Q2.** On the diagram above, add a coloured line along all the places where sharp-sided ridges have been produced.

## Answers

1. See diagram below.

2. All of the ridges marked 'A' on the diagram above.

## Notes

*The purpose of drawing on this diagram is to focus the student's attention on the number of such features in a landscape. By drawing over the features, they have to range their attention over the whole diagram and make decisions about what is, and what is not, a peak or a ridge.*
