

# Snow and ice

**Ask students to identify the features connected with either snow or ice, but not both.**

**Ask them to colour in all features connected with the chosen theme.**

**More advanced students can then be asked to describe the pattern they see.**

*The features are labelled below. The main glacier is in the valley, but there are also glaciers in every mountain*

*hollow, even on the skyline. All other white areas on the colour version are snow.*

*The purposes of this activity include:*

- *identifying snow separately from ice*
- *noticing that snow occurs throughout the year on mountain tops*
- *noticing that ice can occur in the bottoms of valleys beyond the limit of snow*
- *noticing that the settlements do not occur where there is year-round snow and ice (except for ski resorts).*
