

# Rainforests Word Match

## Curriculum Visions

Match the word to the definition by drawing a line from one to the other.

|               |   |
|---------------|---|
| Camouflage    | The lands either side of the equator in which it is more or less evenly hot all year.         |
| Tropics       | Air that has so much moisture in it that the air feels sticky.                                |
| Endangered    | A triangular shape of root that seems to be propping up the main stem.                        |
| Deforestation | To take on the colour or pattern of the surroundings so that an animal cannot easily be seen. |
| Humid         | A tree that rises above its surroundings.   |
| Canopy        | Taking away large areas of forest and using the land for something else.                      |
| Buttress      | At risk from being wiped out as a species.  |
| Emergent      | The uppermost part of the forest, made up of the crowns of the big trees.                     |
