

Properties

Every material is different.

If every material was the same, we would not be able to make many different things.

Here are some of the differences.

Some plastic things are soft and shiny.

Some plastic things are smooth and hard.

Metal things are hard and shiny.

Dough is dull and soft.

Shampoo is runny
and foamy.

Sandpaper is
bendy and rough.

wooden bowl

Wood is dull and hard.

teapot

Pottery is hard
and waterproof.

Is the teapot shiny or dull? Is it hard or soft?
