

# Light and dark

**We need light to see.**

When there is light we can see the shape of things. We can see their colours.

When it is dark we cannot easily see the shape of things or see their colours.

These canoes are in bright sunlight. You can see their shapes and colours very well.

Here are the same canoes by moonlight. They seem to have no colour, and it is hard to see their shapes.

In the day we can  
see each tree clearly.

When it is dark we cannot see the trees.

**What is it like to see by moonlight?**
