

Light and burning

When things burn they give out light.

When something burns it gives out light. Candles, fires and fireworks all give out light.

Sparklers give a magical light.

A fireworks' display can light up the ground.

Candlelight shines
for only a short way.

The light of
a match lasts
for only a few
seconds.

A wood fire gives out a bright glow.

When do people light candles, fireworks and bonfires?
