

Ears

We use our ears to hear the sounds around us.

Our ears are shaped like funnels. They take sound into our heads.

It is hard to keep sounds out.

You can hear better by putting your hand behind your ear.

You hear less sound when you are wearing a hood.

Earphones make it easy to hear music. But you can harm your ears if you play music too loudly.

Do you still hear sounds when you cover your ears with your hands?
