

# Vibrations

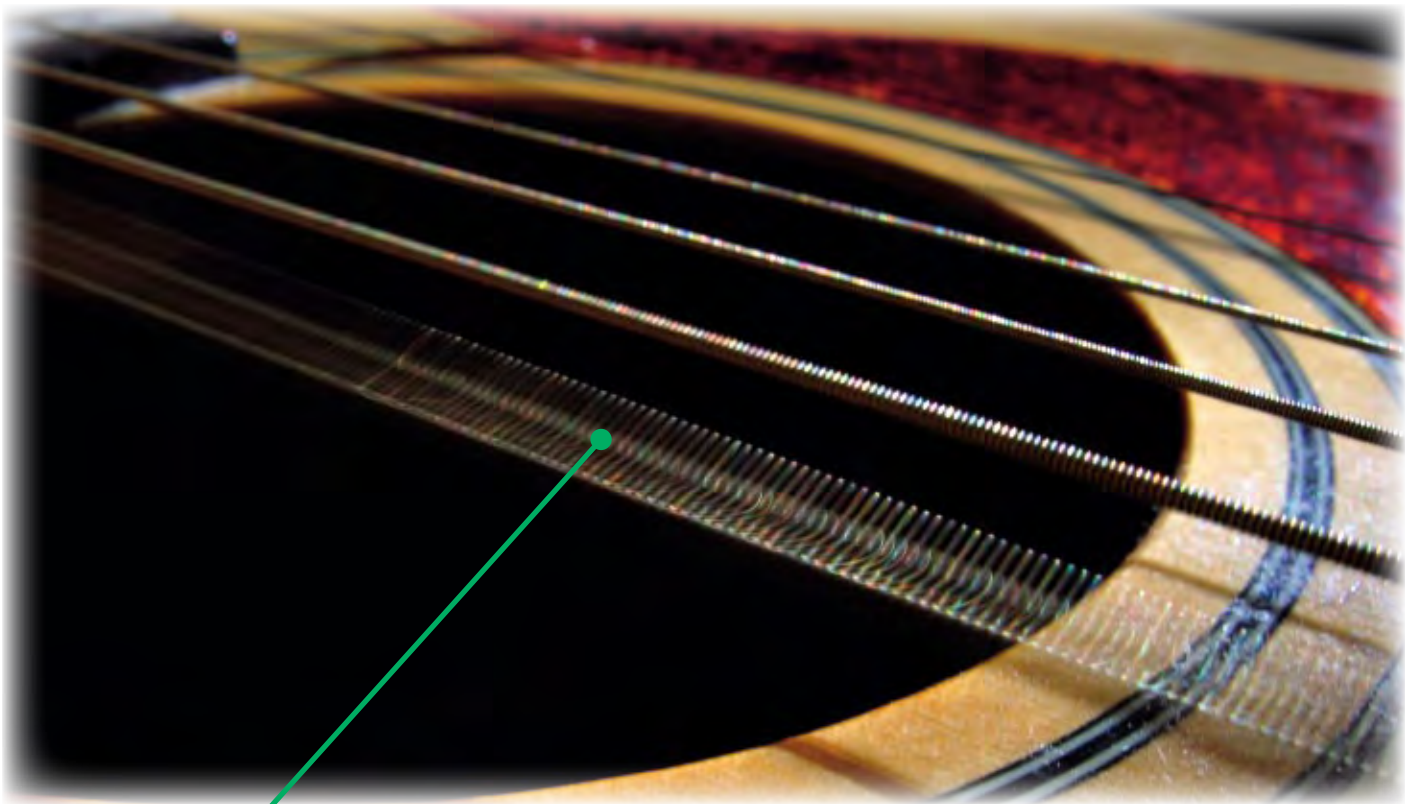

Something vibrates when it shakes very quickly.

If you tap most things they make a dull thud.

Some make a ringing sound.

When something makes a ringing sound, it is shaking about. We say it is vibrating.

We call the shaking a vibration.

guitar string

You can see guitar strings shake to and fro when you pluck them.

You can watch the bars on a xylophone shaking about when you hit them.

A bell vibrates when it is rung.

cymbals

You can feel your hands shake when you crash cymbals together.

**Can you feel your lips vibrate when you blow a raspberry?**
