

Sounds around us

We hear lots of sounds all the time.

Nearly everything that moves makes a sound.

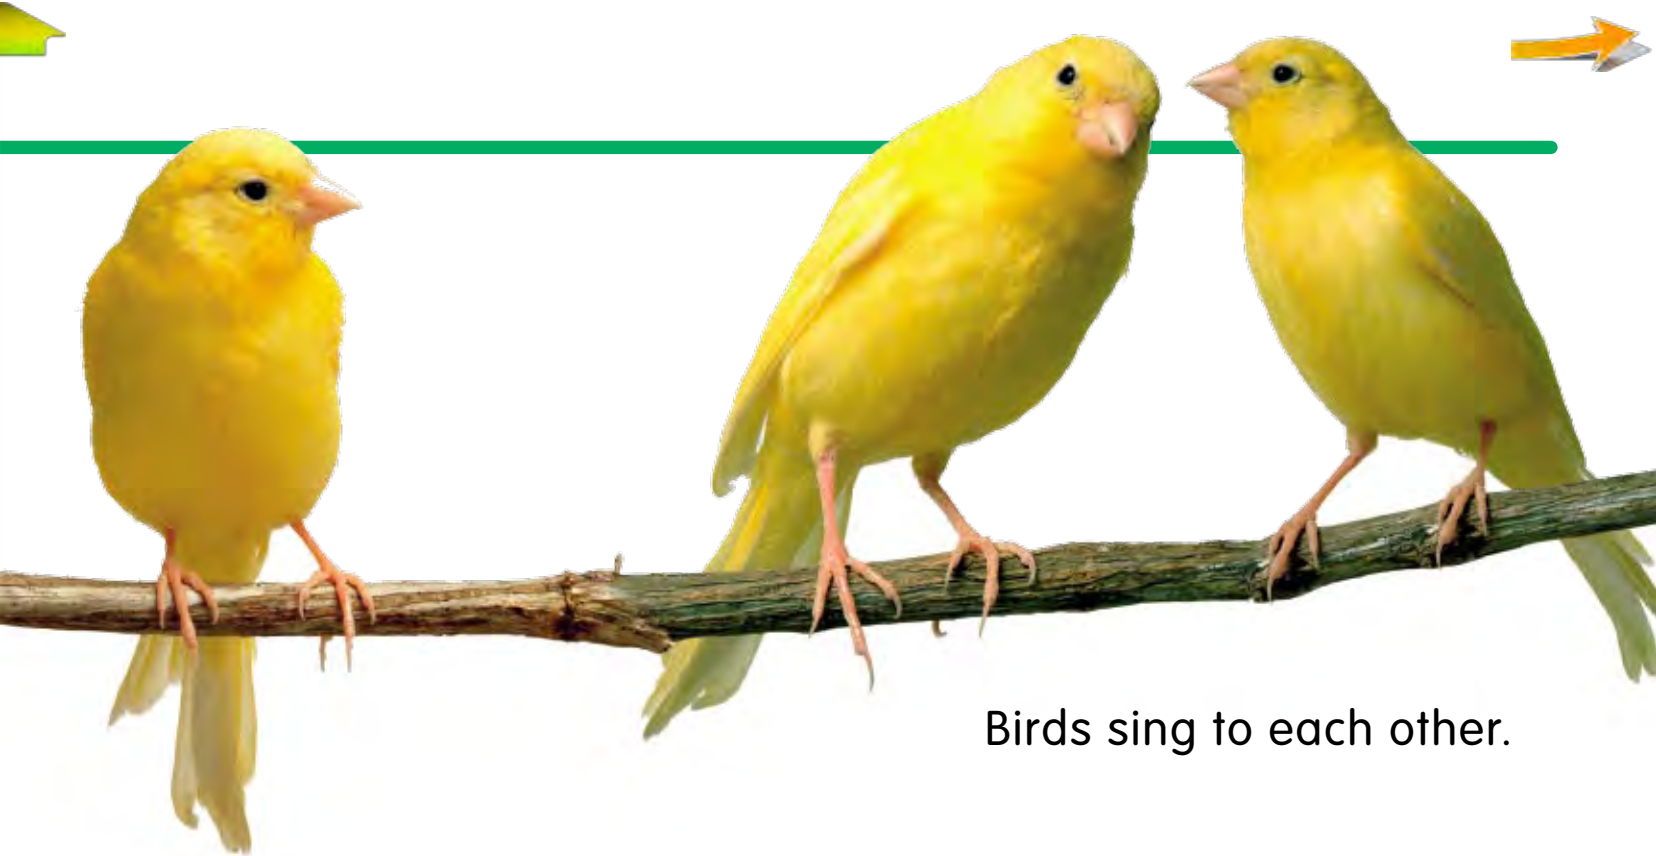

Dogs howl, water splashes, machines whirr, friends call us on the phone.

The streets buzz with people talking and walking.

A dog makes a sound when it howls or barks.

You hear sounds around the house.

Birds sing to each other.

Cities are full of the sounds of people and traffic.

**Sit still for one minute.
How many different sounds can you hear?**
