

Plants and animals

Animals and plants need each other.

Daisies.

Plants grow in the ground.
They have roots, leaves, stems
and flowers.

Flowers in the garden, wild
flowers, trees and bushes are
all plants. Trees and bushes
are plants with woody trunks
and branches.

Plants are food for animals.

A woodland of beech trees.

Animals move around. Many animals, such as slugs and ants, eat plants for food. Animals, such as birds, help plants to scatter their seeds. They also use trees and other plants to nest in.

Ospreys in their nest high in a tree.

A slug eats leaves for its food.

Ants run up grass stems, looking for food.

ants

How can you tell a plant from an animal?
