

Plant and animal parts

All living things have some similar parts. These parts are different in plants and animals.

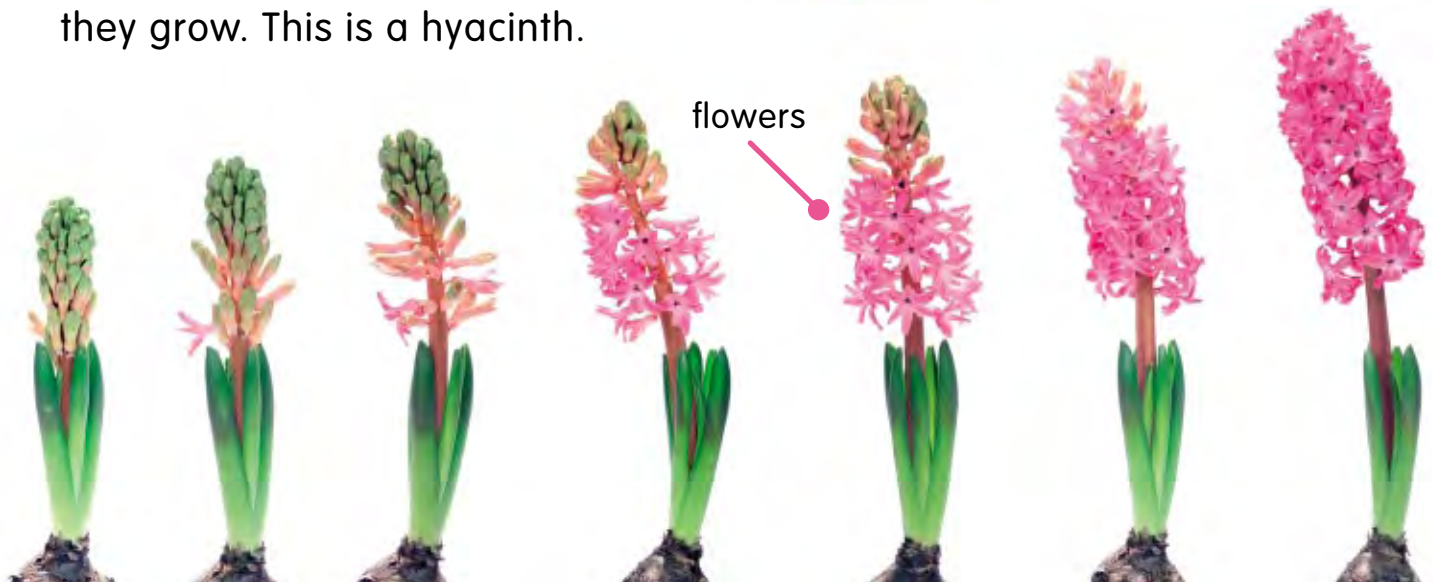

Plants grow in the ground and get water from the soil. They do not move from place to place.

The main parts of the plant are the roots, the stem, the leaves and the flowers.

This is an orchid.

Plants come into flower as they grow. This is a hyacinth.

An elephant. The elephant has a long trunk that it uses to smell things.

Animals move about from place to place. The main parts of an animal are the head, the body and the limbs. Many animals have tails.

A chameleon. The chameleon can move its eyes in different directions.

How can you tell a plant from an animal?
