Light

Plants use light to make food for growth. Plants grow poorly in too little light, but some are also damaged by too much light.

Q1. In the diagram, which arrow (or arrows):

- (i) shows the path of sunlight?
(ii) shows the path of water and nourishment?
(iii) shows the path of food?

Q2. State two places where the green substance is found in plants.

.....

Q3. What does the green substance use to make food?

.....

Q4. Why do leaves on a tree spread out?

.....

Q5. Name a plant that is damaged by too much light.

Q6. Many plants have leaves which turn to different parts of the sky during the day. Why do the leaves do this?

.....

.....
