

Name: Form:

Based on pages 20 and 21 of *Habitats*

How do habitats compare?

Try this...

1. Collect some soil and leaf litter from a woodland or hedge.
2. Collect some soil and leaf litter from a flower bed.
3. Examine each sample for animal life. Record below the animal life you find in each sample.

Looking at the results.

4. What do the results show?

5. How else could you compare the animal life in a wood or hedge with the animal life in a flower bed? Plan some investigations you could make and write about them here.
