The life cycle of an insect

Insects do not grow up steadily like people.
Instead, they change shape completely
at different stages in their life.

Q1. Name the stages of the insect life cycle labelled A to D.

A 

B 

C 

D 

Q2. In what form does a butterfly spend most of its life?

Q3. Why can't insects grow steadily like we do?

Q4. What happens when an insect moults?

Q5. Why does an insect pump itself up after it moults?

Q6. What does a newly formed butterfly do before it flies away?
