# How scents travel

Gases move easily. Scents are gas particles we can smell that are carried along by the air.

**Q1.** The plant on the left, above, is in still air. Draw dots to show where the particles of scent may be found in the air around the plant.

**Q2.** The plant on the right, above, is in a breeze. The arrow shows the direction of the breeze. Draw dots to show where scent particles may be found.

**Q3.** What are scents and smells made from – solids, liquids or gases?  .....

**Q4.** Name two things found in the home that give out scent.

1  .....

2  .....

**Q5.** Why can scents or unpleasant smells travel in the air?

 .....

 .....

**Q6.** Why must you hold a flower close to your nose to smell its scent?
