

Video/English/Subject
Lesson Plan and Guide

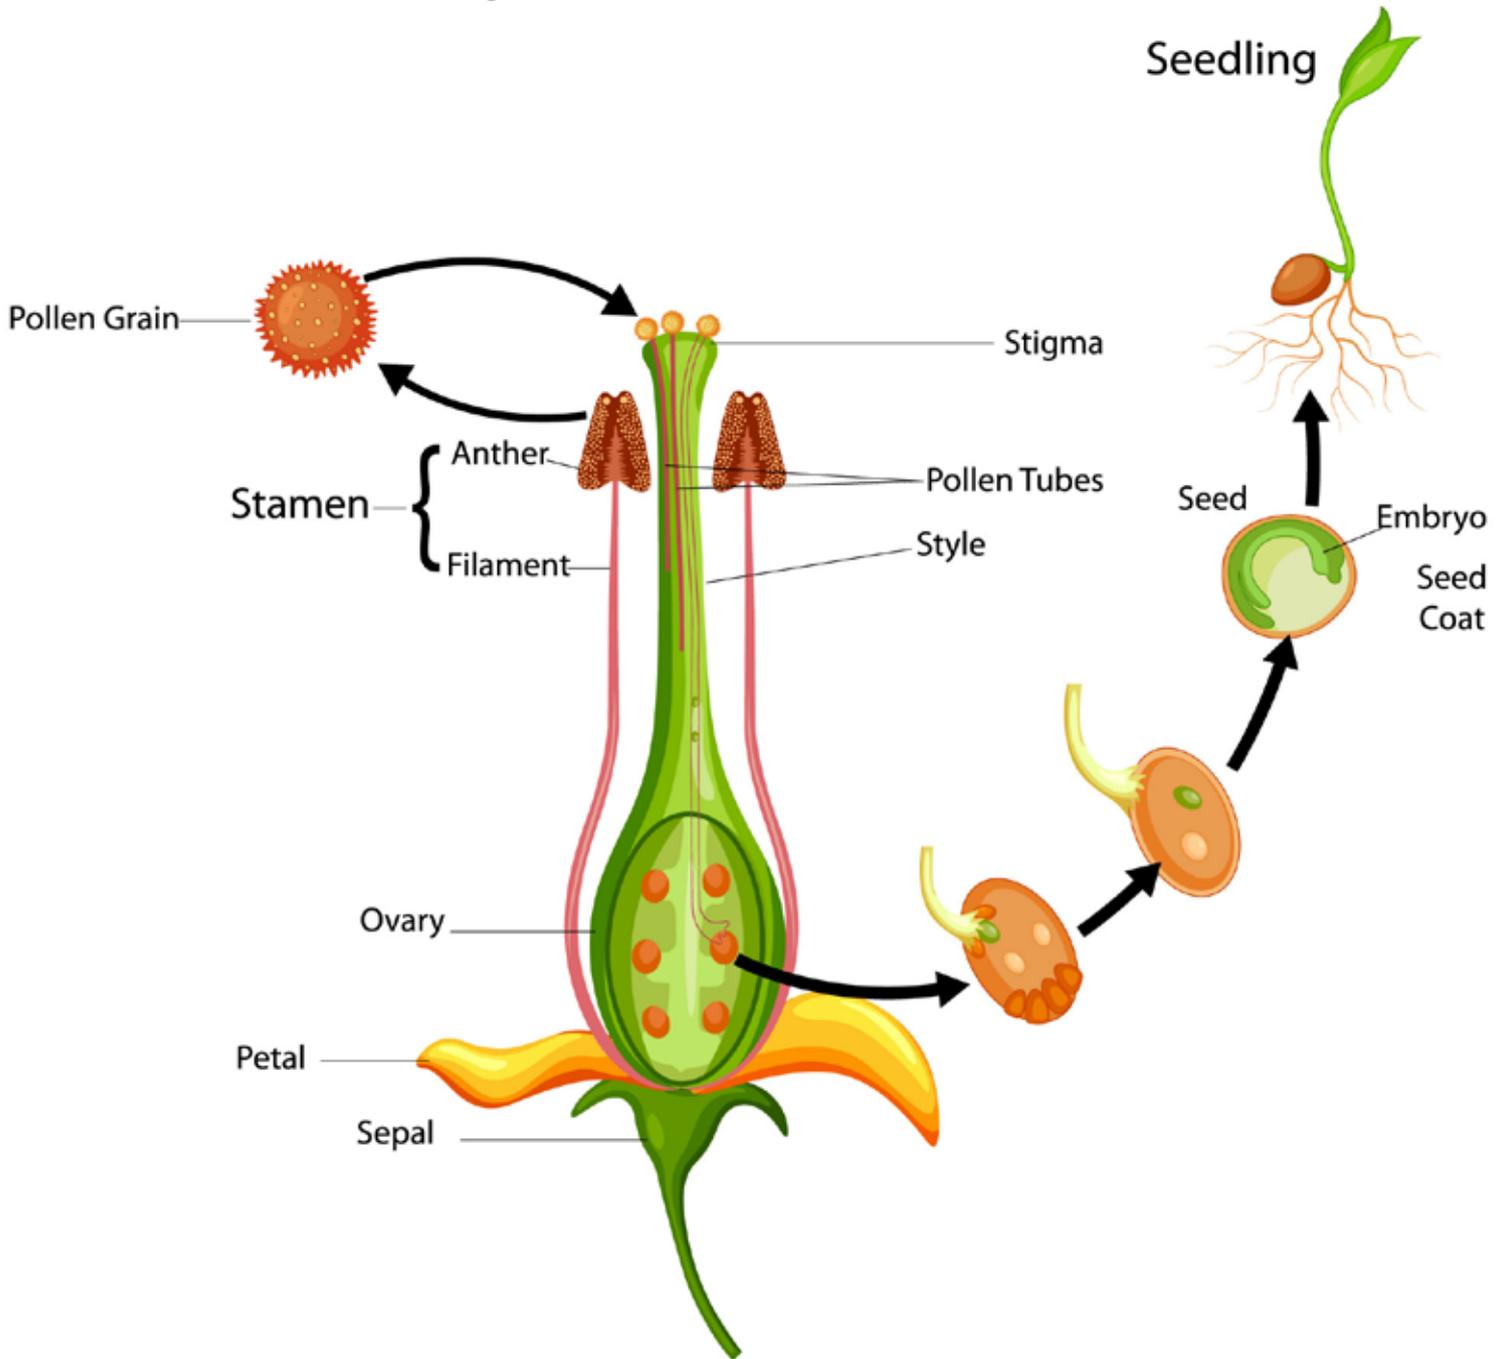

Turn our videos into exciting and
informative experiences.

Wind pollination

Where does the video go when it's not on the home screen?
New and recent videos appear on the home screen. But then they
always go to and stay in the subject areas. So it is always acces-
sible when you want it, provided you have a membership.

Reproduction permission: You may extract whatever you want to
make up your own personal worksheet provided that material
stays within your school and is not put in a public online space.

Reproduction in Plants

Pollen

Teacher diagram

This diagram takes students from the places where pollen is produced, to where it is received and then through the many stages before a new plant is produced from the resulting seed.

Make sure students understand that, for ease of drawing the diagram, the two things are shown on the same flower but pollen needs to be transferred from plant to plant.

This diagram is for a flower pollen, which is the kind of diagram you will need most often. This one is suitable for showing on a whiteboard or printing.
